

# LEARNING FROM DISASTERS

Ensuring mine workers learn from past mining disasters

**Learning from experience, preventing devastating reoccurrences and improving the health and safety of all those working in the mining industry is a profound way to acknowledge and recognise all those affected by mining incidents throughout history.**

Forsythes Training and ACIM Solutions have come together to deliver the Mandatory Resources Regulator 'Learning from Disasters' training package.

**In this One-Day Program you will be learning from those that researched and wrote the program for the NSW Resources Regulator.**

This training is targeted to practising certificate holders for any class of mine to satisfy their maintenance of competence requirement (excluding holders restricted to a specific mine site).

Note: Practising certificate holders may also choose to undertake seven hours of other formal learning on disasters to satisfy their maintenance of competence requirement.

## Learning Objectives

- Recognise recurrent patterns of failure linked to significant work health safety incidents.
- Understand how identifying and managing a principal hazard links to reducing risk.
- Recognise the causal role of human and organisational factors and critical factors play in work health and safety incidents.
- Build an understanding of roles, responsibilities and mechanisms that foster a safe work culture.
- Identify contemporary risk factors and vulnerabilities in your organisational safety management systems.
- Develop risk control options and strategies that best manage work, health and safety risks.

## One-Day Training Program

- \$3000 for dedicated events up to 15 people
